Jorge Pezo

Full-Stack Software Engineer

+1 860-357-8856 · jpezoaltamirano@gmail.com · LinkedIn · GitHub · New Britain, CT

Full-stack engineer with 3+ years of experience building and modernizing enterprise software in insurance. At Travelers I lead hands-on development of a claims platform used by four business units, from database design and APIs to React micro-frontends and AWS infrastructure, and built an AI-powered document extraction tool that turns hours of manual review into minutes. Comfortable in Agile/Scrum teams while taking features from idea to production on my own, using AI-assisted development to ship fast without cutting corners.

Work Experience

Software Engineer 04/2024 – Present

Travelers Insurance · Hartford, CT

- Main developer on a full-stack micro-frontend (MFE) claims management platform built from the ground up, serving 4 business units (ML, Surety, Cyber/Crime, RMU) and replacing a legacy Windows system, making daily work **2-3x faster** for claim professionals
- Own the stack end to end: database schema, **48 API endpoints**, React/TypeScript UI, Terraform infrastructure (Lambda, API Gateway, IAM, VPC), and production support, with **450+ commits** to date
- Work in an Agile/Scrum team with other developers, a product owner, and a scrum master, taking stories from refinement through build, testing, and release while doing most of the hands-on development independently
- Built an AI-powered document processing tool (C#/.NET Lambda + React) that extracts and structures key data from incoming documents, with human-in-the-loop review before anything is saved, cutting manual review from hours to minutes
- Built a real-time record-locking microservice used by multiple apps, with cross-service auth and IAM permissions
- Integrated the platform with **5+ enterprise systems** (iManage, a legacy claims system, underwriting and policy platforms) through API calls and deep-linked navigation, reducing context switching for users
- Partnered with UX designers to ship Figma designs on an enterprise component library (Shadow DOM)
- Use Claude Code and GitHub Copilot daily, shipping full-stack features at a pace that usually takes a team of 2-3

Software Developer 05/2023 – 04/2024

Levi, Ray & Shoup, Inc. (LRS)

- Built new features for a pension administration app, including new C#/.NET views wired into backend services
- Designed SQL Server tables, stored procedures, and complex queries to support new business functionality
- Optimized backend logic in SQL and proprietary tools for fast, accurate processing of large pension datasets

Projects

Real-Time Market Data Alert System GitHub — Python · SQLite · asyncio

- Built a fault-tolerant async Python service that cross-validates real-time data from multiple third-party APIs, with exponential backoff, rate-limit handling, and tolerant JSON parsing
- Kept the scoring engine as a pure, side-effect-free module covered by **30+ unit tests** with no live network calls; added SQLite state tracking, deduplication, and a Telegram bot for real-time alerts and human-in-the-loop decisions
- Scoped it to recommend, not auto-execute, until 30+ validated decisions back the strategy; runs free-tier at $0/month

Education

University of Connecticut, School of Engineering 05/2023

Bachelor of Computer Science · Storrs, CT

Skills

C# · TypeScript · JavaScript · Python · Java · C++ · C · Kotlin · SQL · React · React Native · ASP.NET · Entity Framework Core · Webpack Module Federation · Micro-frontends · REST APIs · Jest · Postman · SQL Server · PostgreSQL · DynamoDB · MongoDB · AWS Lambda · API Gateway · IAM · Terraform · Claude Code · GitHub Copilot · Agile / Scrum

Certifications

AWS Certified AI Practitioner
Amazon Web Services

AWS Certified Cloud Practitioner
